

Training session

” *There are no stupid opinions,
there are stupid decisions!*

COSMIC APPROACHES TO BUILDING A CORPORATE SAFETY CULTURE

Sergey Ryazanskiy,
Astronaut, Motivational speaker,
A Hero of the Russian Federation

What is this training session about?

According to Russian statistics, about 3000 people die in their workplace in Russia every year. Traditionally, labor security departments have been trying to solve the problems that cause these deaths by creating multiple detailed instructions and internal orders. But, the problem of safety at work is not only following the rules and instructions, not only punishments and fines. First of all, it is the creation of a trusting and open environment for the conscious involvement of personnel in solving labor protection problems.

In his training session, Sergei Ryazanskiy discloses approaches to ensuring safety in preparation for space missions, shares the most important tools for creating an internal corporate safety culture, and analyzes the most interesting cases that experts from Roscosmos and NASA have encountered.

Target audience:

- Managers and staff of labor departments
- Any department related to the safety and security of labor

Learning objectives:

Expert's opinion on following:

- Safety is not just following rules, it's a way of thinking;
 - Concept of predictable risks;
 - Safety of a mistake. We are not robots;
 - Following rules and instructions when there is a lack of formalities;
 - Team joint responsibility on Earth and in space.
- 

Length:

120 minutes

Structure:

- training session
- QA
- practical tasks
